

Userful turns a standard PC into a fully featured, flexible and powerful video wall controller. It delivers visually stunning video wall displays over the network with unparalleled simplicity and ease-of-use, at an affordable price.

With Userful you can:

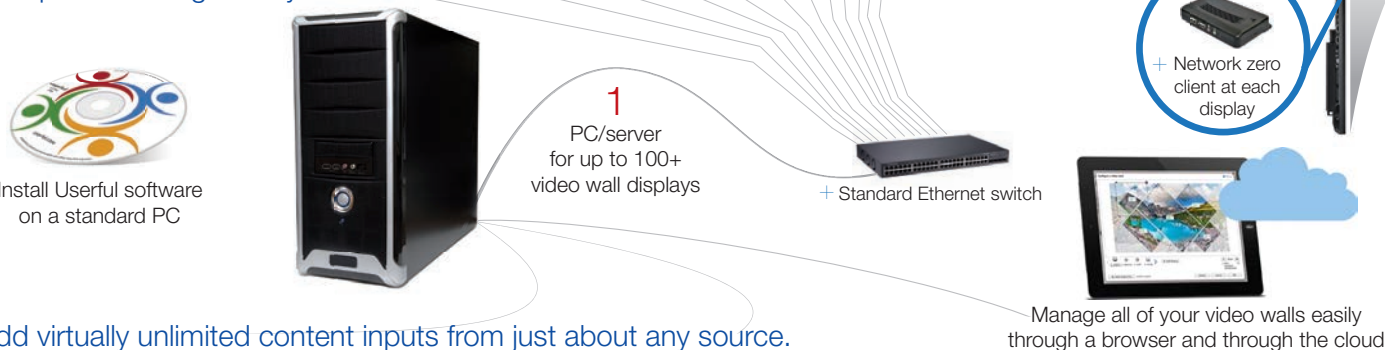

- Deliver any layout including one of a kind artistic or mosaic-style video walls
- With up to 8k source content in real time on up to 100+ displays per video wall
- All easily managed from a browser or smart phone
- Using virtually unlimited simultaneous internal and external content sources
- ...using zones, multi window or picture-in-picture across a single video wall
- ...or onto a mix of video walls and single displays
- All controlled in real time through Userful's API or via a remote control interface staff can use to invoke layout and content presets

## How it Works

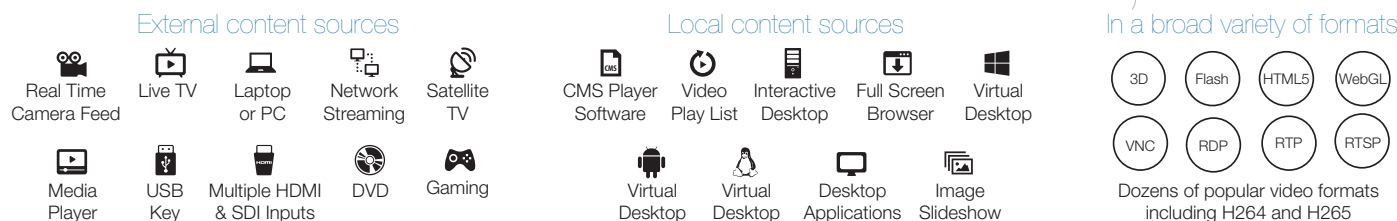

① Pick the types of video walls you need.

② Set up and manage easily.

③ Add virtually unlimited content inputs from just about any source.

## Key Features

### High availability

Install an optional failover server to ensure continuous system availability.

### Mirror feature

Synchronize content across multiple displays or video walls allowing the same content to play at exactly the same time.

### Cloud management

Upload content and schedule changes through the cloud.

### Desktop and HDMI capture

Capture desktops through the network or other sources using add on HDMI capture cards.

### REST API

A platform to programmatically interact with Userful allowing customers to trigger changes to content, layout and more.

# Video Walls Made Easy and Affordable

- Single install setup turns a standard Intel Core i7 PC into a video wall server appliance.
- Deliver any layout including one of a kind artistic, mosaic-style video walls with any angle or rotation of individual displays.
- Get up and running quicker with reduced dependence on specialized technical expertise and expensive proprietary hardware.
- Easily manage multi-site deployments with Useful's Cloud Management option.
- The integrated intuitive browser-based video wall builder enables just about anyone to set up and configure a video wall with drag and drop ease.

## Interactive Viewer

Any tablet or smart phone can control the mouse and keyboard of the video wall making interactivity with a Useful video wall easy.

## Zones, Multi Window and Picture-in-Picture

Maximum flexibility for displaying simultaneous content streams within one video wall.

## Preset Switcher

Use a phone or tablet for one-touch switches between multiple content sources and video wall layouts preset by the video wall administrator.

## Increased life span

Zero client player devices have no moving parts or operating system, making them long-lasting, even for demanding or harsh environments, including high heat, grease, dust, steam, and outdoor elements.

## Other types of display

Support stand alone digital signs, touch kiosks, or desktops all from the server that supports the video wall to create a complete digital display solution.
